Dear Friend,

In the past nearly two years, the 25G SFP28 transceivers sold very well. We are still focusing on 25G optical transceivers (LAN-WDM/DWDM/CWDM/BIDI/SR/LR).

Advantages of 25G transceivers:

1. Cost-saving
2. Low-loss compared with 100G transceivers
3. Using 2 fiber channels to achieve 50G transmission

The deployment of 5G network promotes the demands of 25G optical transceiver. We hope these items will meet your market too.

Await your good sound!

Thanks,
SKY
