City Council Members:

Thank you in advance for changing to one monthly billing that includes water, sewer, and storm water.

It seems completely reasonable to base the residential sewer billing on winter water rates - please vote to do this!

When you design the new bill format, PLEASE consider including a graph that shows the previous year's monthly water consumption rates. Such a graph will help residential customers identify when their water use has spiked from either leaks or imprudent water use, and help us all conserve water. These graphs are common practice among utilities (even NorthWestern Energy includes graphs), and are pretty much the only thing I miss from the Mountain Water days.

Thanks!
